Unit 13 Website Development - Assignment 3

Key

0	No Submission	A submission hasn't been received so can't be marked.
1	Not attempted	This section is missing so can't be marked.
2	Not achieved	An attempt has been made but it is insufficient.
3	Close to achieved	An attempt has been made, but improvements are needed.
4	Achieved	The criteria for this section has been met.

Criteria		1st	2nd

Task 1 - Develop and test a website

		1st	2nd
Prepare assets and content for the website, demonstrating awareness of purpose, listing sources of assets.	P4	3	0
Develop a website containing at least eight interlinked web pages, demonstrating awareness of purpose.	P5	4	0
Test the website for functionality and purpose, repairing any faults, and documenting changes.	P6	1	0
Prepare assets and content for the website demonstrating awareness of the users' requirements, with all sources fully referenced.	M3	1	0
Develop a website including interactive components, demonstrating awareness of user requirements and taking account of usability.	M4	2	0
Test interactivity and gather feedback from others on the quality of the website, and use it to improve the website, showing awareness of user requirements.	M5	2	0
Refine the website, to improve accessibility and performance, taking account of user feedback and test results.	D3	1	0

Task 2 - Review the finished website

		1st	2nd
Explain how the final website is suitable for the intended audience and purpose.	P7	2	0
Review the extent to which the finished website meets the needs of purpose and user requirements, while considering feedback from others and constraints.	M6	3	0
Evaluate the final website against the design and justify any changes made, making recommendations for further improvements.	D4	2	0

Deadline:	3/4/25	Submitted:	3/4/25	Extended:		**First Submission**
Marked:	1/5/25	IV'd:		Late:		

You have not currently achieved yet. You have made a very good website and have made a start on your documentation. You have made some comments on your code which is good, in the future you should be including more. Please complete comments in red.

P4: You have included an asset table that is NEARLY sufficient and have included at least 4 assets. You need to change the reference column to actual links (that isn't your own content) so I can find where you got them from. You have demonstrated awareness of the website's requirements.

P5: You have created at least 8 interlinked webpages. All pages are loading and all images are looking good. Your website is very responsive, but there are a few issues such as the banner not going smaller or splitting up and the nav bar not fitting (in future a hamburger menu could be useful). It's good you have used more CSS files, but in reality you only need one. Then maybe a couple for a singular page to keep your main CSS file from being too big. Your website design is well done and looks good. You have demonstrated awareness of the purpose. You have sufficiently met the P5 criteria.

You have included: at least four different assets, internal and external hyperlinks, text, at least one table (phone layout), forms (contact), menus (nav), colour schemes and styles.

P6: You need to complete your test plan that you started in the previous assignment and have at least one fault fixed.

M3: You need to complete an asset table that is referenced sufficiently. You need to have considered user requirements with this.

M4: You have not considered user requirements and usability from the interactive components. But you have created one interactive feature - hover over making the options expand. You need to create another interactive feature, for example you could make a pop-up success box for the contact form. You then need to link this back to user requirements for both interactive features.

M5: You have not tested interactivity and said what isn't working. You have gathered feedback from one peer, you need to discuss this and relate it to user requirements and show how you have used it to improve your website.

D3: You need to define the website, to improve accessibility and performance, taking account of user feedback and test results.

P7: You have made a start by discussing your website and what has changed but you need to explain how the final website is suitable for the intended audience and purpose.

M6: You have started to review the extent to which the finished website meets the needs of purpose and user requirements, while considering feedback from another peer and contraints. You need to link more positvely to the scenario brief.

D4: You have not evaluated the final website against the design and have not made recommendations for further improvements. Don't forget to include a conclusion. You have justified any changes made.
